Professional Summary

Analytical and customer-focused professional transitioning from software development to product management. Expertise in leading the full project lifecycle, from user research and requirements gathering to final product launch. Proven ability to lead cross-functional teams and leverage data to drive user experience improvements and achieve significant operational efficiencies.

Education

VIT University, BTech in Electronics and Communication Engineering June 2018 – May 2022
Vellore, TamilNadu, India | CGPA: 8.47

Experience

Developer, Sapiens – Bengaluru July 2024 – present

- Owned the end-to-end lifecycle of an automated document generation solution for the **P&C insurance domain**, from initial problem validation to final launch, directly addressing key customer communication challenges.
- Conducted qualitative user research through **surveys and 1:1 interviews** to define requirements for **5+ digital capabilities**, translating customer needs into actionable technical solutions and product features.
- Led a cross-functional team of 10** as the subject matter expert, aligning engineering, design, and business stakeholders to deliver the project successfully **within a 6-month timeline**.
- Drove a **40% improvement in solution visibility and user experience** by identifying user pain points and implementing targeted product optimizations.
- Achieved a 25% reduction in document generation time** by analyzing performance bottlenecks and prioritizing optimization initiatives, directly improving operational efficiency for users.

Associate Developer, Sapiens – Bengaluru June 2022 – July 2024

- Foundation Development: Engineered the foundational codebase to **establish connections between documents and the database**, implementing the core business logic and calculations that enabled efficient data handling for the product.

Project Intern, Tata Consultancy Services – Bengaluru Feb 2022 – Apr 2022

- Data Analysis & Insights: Developed a predictive forecasting model to identify potential financial loss, analyzing customer transaction behavior and macroeconomic data to inform risk and compliance strategy.
- Model Validation: Achieved a **predictive accuracy of 81.61%**, demonstrating the ability to build reliable data models to support critical business decisions.

Projects

FRND – Retention Case Study (Capstone)

- Drove a 18% retention increase: Conducted 30+ user interviews to identify key churn drivers and proposed product features that raised 7-day retention from 22% to 40%.
- Developed a data-backed product strategy: Defined the North Star Metric and OKRs, using the RICE framework to prioritize features aimed at addressing user pain points, including free coins and safety parity.

Meesho – Retention Challenge

- Identified and addressed core churn drivers: Used research methodologies like JTBD and First Principles to pinpoint a lack of trust due to poor product quality and misrepresentation as the primary cause of user churn.
- Developed a key product feature: Proposed a one-tap video review feature to increase social proof, directly solving for user skepticism towards product authenticity and ultimately driving repeat purchases.

Skills

Product: Product Development & Roadmapping, Product Design & Launch, Agile Methodologies, User Research, Requirement Gathering, Roadmapping, UAT Testing, Stakeholder Management, Jira

Technical: Java, SQL, Python

Analytical Tools: MS Excel, Power BI, Tableau

Extracurricular Activities

- IEEE Comsoc: Served as Board Member and organized the VITECON International Conference.
- National Cadet Corps (NCC): Represented at the state level, demonstrating leadership and teamwork.
